

Appendix 1: Configuring the Router via Web Management Page

(for Mac OS X/Linux users or Windows users who can't run the mini CD)

- 1 Open your browser and type <http://tplinklogin.net> in the address field, then use the user name **admin** and password **admin** to log in.

- 2 Click **Quick Setup** in the main menu and click **Next**.

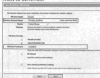

- 3 Select the WAN connection type provided by your ISP. Or you can select **Auto-Detect** and click **Next** to continue.

- 4 The **Dynamic IP** is the suitable connection type for most cases. Here we take it as an example. In most cases, you don't need to done the MAC address if you have already rebooted the modem with the new router. But if you can't get connection to the Internet after Quick Setup, please run it again and done the MAC address for a try. Then click **Next**.

- 5 You can rename your wireless network and create your own password on this page. The default wireless name is **TP-LINK_XXXXXX**, and the default wireless password, the same as the PIN code, is printed on the bottom label. Click **Next** to continue.

- 6 Click **Finish** to make your settings take effect.
