CL24 Coach Lighting strip: Cool white with Amber door lights Door lights light after train stops as on modern coaches/units Senses movement & turns the lights on & off automatically

- Light coaches & units
- No wires or pickups
- Lights automatically

Fitting instructions

Setting up - Fitting the battery Slide battery (+ side up) in under gold contact first, then push down. Once the battery is fitted the LED's should light - the slightest movement automatically switches them on.

- Remove roof from coach/multiple unit Tip - Sometimes the roof and body are all one piece & unclip/unscrew from the chassis and sometimes the roof comes off on its own. Model shops and manufacturers can also offer advice.
- 2 Prepare for fitting amber door LEDs Decide where to fit the amber door LEDs - on some models they already have lights painted on. Carefully drill a small 1.8mm hole for LED lens to fit into - a small finger chuck is usually the safest and easiest way to drill.
- 3 Fit the lighting strip into the roof Line up the strip and door LEDs with the holes you have made and fit into the roof - you can cut the LED wires shorter if necessary. Use Blutack or double sided pads to hold the lighting strip and LEDs in place if required.

You have completed installation! Lights will switch off automatically four minutes after the last movement.

Battery When lights become dim or intermittent replace with a standard CR2032, available from many retailers and Train-Tech dealers as part BAT1.

Lighting strips may be shortened as the red dashes show - details overleaf

Other coach lighting strips

Versions with cool or warm white LEDs plus an extra effect like flashing tail or flickering flame tail light, electric spark effects & auto amber door lights

Ask for a free Train-Tech brochure!

Battery & amber door LEDs included

Plug amber door LEDs into sockets as shown - note polarity. LED wires can be extended if required

CL24 Cool White Coach Lighting strip plus Amber door lights

Track Tester

- Quickly tests track for power faults
- Low cost and easy to use
- Works on N, TT, ÓO or HO Track
- Indicates the DC polarity, or DCC, or a fault
- Small enough to check point frogs

TT1 Track Tester

Buffer Lights

- Add realistic stop light to any siding
- Simply clips onto track No wires!
- Fits next to most buffer stops & kits
- Or at platform end or free standing
- On DCC both lights are on constantly
- On DC one light is on & varies with speed BL1 00/H0 gauge Buffer Light

BL2 N gauge Buffer Light

One-Touch DCC™ Digital Signals

Track not included

- Signal with DCC decoder built into base
- Can just plug direct into track no wires! Easy to fit and use no CV programming! Can sync to other signals & points
- DS1 Home: Red (R) and Green (G)
- DS2 Distant: Yellow (*) and Green (*)
 DS3 Home Distant: (*)
 DS4 Distant: (*)
 (*)
 (*)
- DS5 Outer Distant: (R) (Y) (G) (Y)
- DS5HS Outer Dist: (R) (Y) (G) (High Speed mainline) DS6 Dual Head Home: RG
- DS7 Dual Head Distant: (Y) (G)
- DS8 Stop-Caution: Red (R) and Yellow (Y)

One-Touch DCC™ Point Controllers

not included

- Work with most solenoid point motors
- Just connect 2 wires to nearby DCC rails
- Easy screw terminals no soldering
- Built in CDU for efficient operation
- Can sync to other points and signals

PC1 DCC Single Point Controller PC2 DCC Quad Points Controller

LFX Lighting Effect Controllers

LFX1 Level Crossing Barrier

Lights a sequence of steady amber and then flashing red LEDs as seen at crossings LFX2 Home & Shop Lighting

Randomly controls lights in houses, shops,

stations, pubs

LFX3 Traffic Lights

Controls one pair of timed traffic lights (TL1 Traffic light kit also available)

- Easily add lighting effects to your layout LEDs screw in - no resistors or soldering
- Powered by 9v battery, 12-16V DC or DCC
- On DC the effect is on when powered
- On DCC the effect can be controlled
- Effects LEDs are included

LFX4 Log or Camp Fires

A realistic fire effect using amber, yellow, red LEDs LFX5 Welding effects

Realistic electric arc welding effects with bright LEDs LFX6 Quad LED Lighting Controller (DCC Only) Controls 4 sets of LEDs on and off using separate DCC

addresses. Directly powers 4 LEDs per output LFX7 Flashing effects

Simulates four flashing effects; belisha beacons, emergency services, camera flash, lightning, sparks

Self Assembly Colour Light Signal Kits

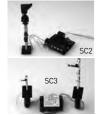

Every kit includes the signal head, aluminium post and base plus detailing kit inc ladder, handrails

- Low cost adapt to your own design Control by switches or a signal controller LEDs are prefitted to a narrow PCB
- General purpose signal kit no LEDs: SK1 Basic kit 2/3/4 aspect & dual heads Signal kits with LEDs and resistors SK2 Home 2 aspect kit Red (R) Green (G) SK3 Distant 2 aspect kit 🕎 🌀 SK4 Home Distant 3 aspect kit ® (Y) (G)
 - SK5 Distant 3 aspect kit (V (G) (V) SK6 Outer Distant 4 aspect (R) (G) (V) SK7 Dual head Home 2 aspect (R) (G) SK8 Dual head Distant 2 aspect (Y) (6)

One-Touch DCC™ Signal Controllers

- Control LED & Semaphore signals by DCC
- Easy to set up & use -No CV programming!
- Easy screw terminals no soldering
- Can sync to other points & signals

SC1 Dual 2 aspect colour light signals controller Controls one or two 2 aspect colour light signals. SC2 3 or 4 aspect or 2 aspect + route signal control Controls one 3 aspect or one 4 aspect or one 2 aspect + route.

SC3 Dual Dapol 00/N Sempahore signal controller Controls one or two standard 00 or N Dapol motorised semaphore signals by DCC. Signals connect direct to the SC3 no modifications or power supply needed.

Automatic Coach Lighting

Rolling stock not included

Easy to fit in seconds - no wiring! No switch - senses motion & turns on!

- Turns off automatically 4 minutes after stopping
- No pickups so works on regular DC & DCC Traditional warm white or modern cool white Also with tail light, sparks or door light effect
- Lights stay bright & constant with no flickering Fits most 00/H0 coaches and maybe cut down

Coach Lighting Strips (including LEDs and battery):

CL1: Cool white for modern coaches with fluorescent or LED lighting

CL2 : Warm white for traditional coaches simulating oil lamps or bulbs CL21 : Cool white plus modern flashing lantern LED tail light

CL22 : Warm white plus flickering flame lantern LED tail light

CL23 : Cool white plus bright electric spark arc effect LEDs CL24: Cool white plus amber door lights which light after train stops

Automatic Tail, Firebox & Loco Lights

- No switch senses motion & turns on!
- Turns off automatically 4 minutes after stop
- No pickup, wires or soldering LED plugs in
- Fit in brake vans, coaches, loco, wagons etc Runs for ages on small button battery

Single output modules: Dual output modules: AL1 Flashing Tail light AL21 Flashing + constant AL1 Flashing Tail light AL21 Flashing + consta AL2 Flame Tail / Firebox AL22 Flame + constant AL3 Constant lighting LEDs & battery included

AL23 Sparkarc + constant AL24 Doors open + constant

SFX Sounds for Trains

Each Capsule is supplied with battery, sound tube & fitting guide SFX10: Steam Locomotive SFX20: Diesel Locomotive

SFX30: Electric Power Locomotive

Easy low cost sound that works on any railway Easy to fit in seconds - no connections

No switch - senses motion & turns on! No pickups so works on regular DC & DCC

Self contained - built in speaker & battery Tiny capsule: 25mm x 20mm x 12mm approx Fit capsule into loco, tender, wagon, coach...

Real recorded sounds - Steam & Diesel etc SFX50: Diesel Multiple Unit SFX60: Electric Multiple Unit See our website SFX70: Shunting

for more info & to hear the sounds

SFX80: Passenger Coaches SEE WWW.TRAIN-TECH.COM OR CONTACT DCP FOR FREE COLOUR BROCHURE

Coach Lighting Strip - additional information Cutting the lighting strip down

The strip may be cut down, either to fit it into a shorter coach or to split lighting inside a compartment to avoid obstacles such as a pillar, wall or a motor in a multiple unit for example. With care it may be cut at any of the four points indicated by a dotted line as shown right & overleaf. We suggest using fine sharp model or wire cutters to make a clean cut without getting too close to any silver circuit board 'pads' or twisting the strip. Remove the battery before you cut and smooth the edges with a fine file before using. If splitting the lighting strip you can reconnect part strips using wires to link any two rows of 3 silver pads together.

Moving Tail, Spark or Door effect LEDs

If your lighting strip also has tail, spark or door light effects you can also move these either by moving the fitted socket(s) or connecting the LED's directly to the silver pads (this requires soldering). Note that all rows of the 2 and 3 silver pads on the lighting strip are connected together so any can be used either for effect LED's or connecting split strips together. The drawing on the right shows the many possible positions for the effect LED's.

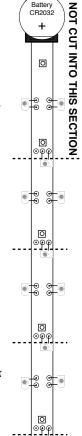

Note that modifications made to the strip are at the owners risk

How the automatic coach lighting strip works

The strip incorporates a special microchip and motion sensor which detects slight movement and turns on the lights, then keeps them on until four minutes after the last motion, so that the lights do not go out as soon as it stops at a signal or station.
